

#### GENERAL

Variable spring supports are used for supporting pipework, vessels, columns and pipe connections to large tanks, that are subject to thermal movement and/or subsidence.

They are used when it is not possible to use rigid hangers and Constant effort spring supports would be uneconomical

For small vertical movements up to about 75mm the variable effort spring support is recommended. The Binder Group manufactures four basic travel range units. These are BV35, BV70, BV140 and BV210 and have a maximum working range of 35mm, 70mm, 140mm and 210mm respectively.

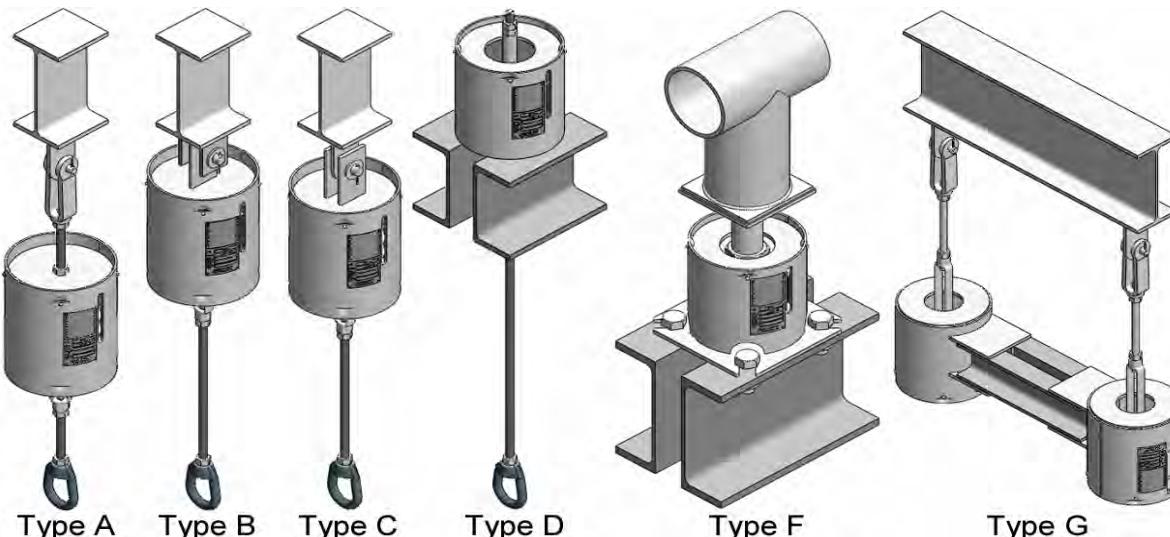

This full travel may be used provided the necessary calculations are carried out to ensure that the pipework and nozzle connections can withstand the large changes that occur during pipe movement.

Most international standards advise a maximum load variation of 25%, it is therefore recommended to select a variable effort spring support on this basis. Care should always be taken to ensure that the selected unit has sufficient travel available to permit the free vertical movement of the pipe when moving from the cold to hot position.

In keeping with generally accepted practice, we recommend that the pipe load is correctly supported when the pipe is in its normal working position. This ensures that no abnormal or excessive forces, due to out of balance supporting effort, is transferred to the pipework in its stressed working condition.

#### STANDARD DESIGN

- All units are easily adjusted, Types A, B, C and G being supplied with a Turnbuckle built into the unit. Type F units use a threaded load column.
- Carbon Steel construction with Stainless Steel scale plate.
- Ideally suited for highly corrosive environments such as Offshore and Refining installations. Standard design allows surface protection system on all internal and external surfaces limiting potential corrosion.
- Scale plate fitted with Hot (Red) and Cold (Blue) load indicators.

## VARIABLE SPRING SUPPORTS

BV35, BV70, BV140, BV210

### STANDARD DESIGN

- Compact design saving headroom, this is particularly important in Offshore applications where space is a premium.
- Load indicator visible from both sides of the unit.
- Spring pressure plate ensures the coil is always centred in the can.
- Every size has a reserve of travel at the upper and lower limits.
- Type F units supplied inclusive of load flange.
- Pre Set Stops - The Binder units are supplied as standard with Pre-Set travel stops locking the unit in the cold position.
- Low maintenance design.

### CORROSION PROTECTION

- Standard finish is Hot Dip Galvanised to ASTM A153.
- For offshore or highly corrosive environments, the units are available in the Binder system 1 paint system. Units are blast cleaned to AS1627 Part 4 Class 2.5, followed by a 3 coat epoxy paint system to 275 micron DFT. Final colour is Binder Blue (AS27000 B23). Other colours available.
- Helical spring coils are acrylic painted for Standard HDG units. Marine grade plastic coated coils are available as an option.

### OPTIONAL FEATURES

- If the unit is to be subject to a hydrostatic test load, this should be nominated at the time of ordering and a factory fitted hydrostatic test stop will be installed. Hydrostatic test stop allows up to twice the normal load to be applied during the test.
- Lifting lugs may be fitted if requested at time of order.
- Client nominated corrosion protection systems are available if required.
- Type F units can be provided with a low friction PTFE slide plate mounted on the load flange

### SPECIFICATION

- Binder Group Spring Supports conform to the requirements of the following international specifications:  
British Standard BS 3974.  
MSS SP 58, 69 and 89.  
ASME B31.1  
ASME B31.3

### QUALITY ASSURANCE & QUALITY CONTROL

- Binder Group maintains a quality system that conforms to Australian Standard AS/NZS ISO 9002.
- Inspection & Test Plans and Quality Plans are available for all orders if required. These should be nominated by the client at time of inquiry or order.
- Quality and Spring unit performance reports are available for all units manufactured and supplied by Binder Group.

### WHEN ORDERING

When ordering please nominate:

- Support model, size and type. Typically, BV70-F-15. Then go to Page 84 and Page 85 to select the corresponding Part Number. If in doubt, our Engineers will be happy to assist in selection.
- To help our Engineers select the correct size, please supply Hot (or Cold) load (kg or kN), movement (mm) and direction of movement up or down (+ or -).
- Whether hydrostatic stops are required and if so hydrostatic load.
- Corrosion protection system required.
- Support identification reference for inclusion on the scale, generally called a Tag Number.

## VARIABLE SPRING SUPPORTS

### TYPE SELECTION

The type of spring to be used is normally determined by the physical characteristics of the structure to which the spring assembly will be attached, as shown by the typical applications.

### METHOD OF SELECTION

In order to select the correct spring hanger size it is necessary to know the actual load which the spring is to support (inclusive of pipe weight, insulation, contents and ancillary equipment). Also the magnitude and direction of the pipe line movement from the cold to the hot position, the actual load is the hot load. The cold load (preset load) is calculated by adding (up movement) or subtracting (down movement) the product of the spring rate times the movement to the hot load, e.g.:  
 Cold Load (MVT.UP) = Hot Load + (MVT. x Spring Rate).  
 Cold Load (MVT.DN) = Hot Load - (MVT. x Spring Rate).

### USING THE SELECTION TABLE (EITHER N or kg)

1. Select the actual support load in the body of the table.
2. Check that the support travel can be accommodated within the recommended working range of the unit size selected by reading the table up or down, dependent on the pipe movement direction. It should be noted that the chart must be read opposite from the direction of the pipe movement.
3. If the movement can be accommodated then by using 25% as the maximum load change cold to hot the travel series can be established.

Variability = Movement x Spring Rate x 100  
 (%Load Change) Hot Load

#### EXAMPLE:-

Actual Load (Hot Load) = 10789 N.  
 Pipe Movement 20 mm down cold to hot.  
 Maximum variation from cold to hot load = 25%.

### USING N SELECTION TABLE

Enter table at 10789 N. This is located in size 12 column. Since the pipe movement is down, move up the column for a distance of 20 mm. This travel is acceptable for all travel series, therefore unit size 12 is selected.

### CHECK VARIABILITY

$$\text{Variability} = \frac{\text{Movement} \times \text{Spring Rate} \times 100}{\text{Hot Load}}$$

From lower chart select spring rate for BV35, Size 12 = 157.6 N/mm

$$V = \frac{20 \times 157.6 \times 100}{10789} = 29.2 \%$$

This would NOT be acceptable.

Now select spring rate for BV70, Size 12 = 78.8 N/mm

$$V = \frac{20 \times 78.8 \times 100}{10789} = 14.6 \%$$

This is acceptable.

UNIT SELECTED WOULD BE BV70 SIZE 12

Preset Load = Actual Load - (Movement x Spring Rate)

Preset Load = 10789 - (20 x 78.8) = 9213 N

Unit to be ordered would be BV70 Size 12.

Preset Load = 9213 N. Hot Load = 10789 N.

### CALCULATING THE ROD TAKE OUT FOR A HANGING TYPE SUPPORT

Having selected the support type, series and size, the next step is to calculate the rod take out. Note that the rod take out dimension listed in the various tables is given for specific types, the dimension is always given at the minimum load position. To calculate the rod take out for example BV70-A-16 Preset Load = 33861 N

At the intersection of a horizontal line from size column to a vertical line down from column headed rod take out type A - we obtain a rod take out of 376 mm. This is at the minimum load position. To this dimension we must add the amount of pre-compression from the minimum load position to the preset load position.  
 Return now to size selection table.

Enter the body of the table where the load of 33861 N reads in the Size 16 column, moving horizontally to the left to read the amount of precompression required for a series BV70 spring. In this example the precompression is 40 mm. The rod take out = 376 + 40 = 416 mm. Other loads are treated in a similar manner. Intermediate precompression dimensions are obtained by linear interpolation.

### TO CALCULATE LOADED LENGTH 'X' FOR 'F' TYPE BASE MOUNTED SUPPORT

Having selected the support type, series and size, the next step is to calculate the loaded length. Note that the loaded length dimension listed in the various tables is given as minimum and maximum.

The maximum figure should be used for calculation purposes.

#### EXAMPLE:-

Calculate the loaded length for BV140-F-10, preset load = 5414N.

At the intersection of a horizontal line from "hanger size" column to a vertical line down from column headed "Loaded Length X, Type Fmax." we obtain a height of 778mm. This is at the minimum load position. From this dimension we must subtract the amount of precompression from the minimum load position to the preset load position. Refer now to size selection table, and enter the body of the table where the load of 5414N reads in the size 10 column and moving horizontally to the left to read the amount of precompression required for a series BV140 spring. In this example the precompression is 60mm. Therefore the loaded length = 778 - 60 = 718mm. Other loads are treated in a similar manner. Intermediate precompression dimensions are obtained by linear interpolation.

### CAUTIONARY NOTE FOR BASE MOUNTED TYPE

BV35 and BV70 all sizes.

Lateral loads on Base Mounted Supports shall be limited to 25% of the **maximum working load**. Where higher loads are envisaged, consideration shall be given to the fitting of P.T.F.E. slider pads or rollers (Type 'K').

BV140 all sizes.

Lateral loads on Base Mounted Supports shall be limited to 15% of the **maximum working load**. Where higher loads are envisaged, consideration shall be given to the fitting of P.T.F.E. slider pads or rollers (Type 'K').

Type D

Notes :

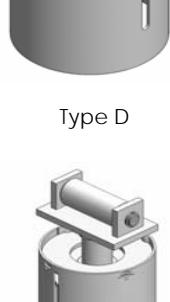

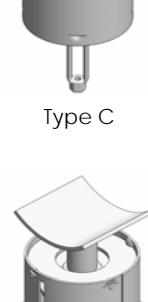

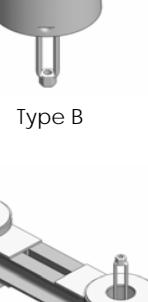

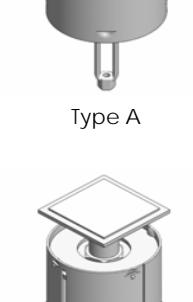

1. G Type units available in three width ranges.

2. Please supply rod centre dimension with order.

2. F Type units. Client to advise if a PTFE slide plate is required.

Ordering Information

Please select Part ID from table for required Variable Type and Size, and specify required surface finish.

# Variable Spring Supports

BV35-BV70-BV140-BV210

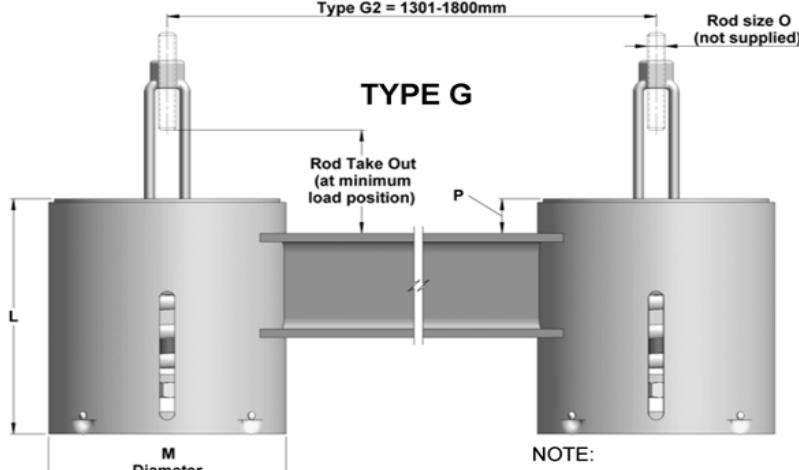

**SITE ADJUSTMENT:**  
TYPES A, B, C & G  $\pm 75\text{mm}$   
TYPES F, H & K  $\pm 25\text{mm}$

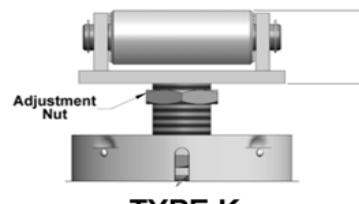

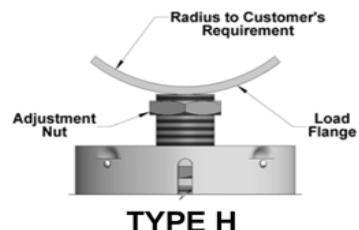

**GENERAL NOTE:**  
Sizes 0-17 are manufactured utilising the dimpled casing construction.  
Sizes 18-22 are manufactured as a totally welded unit.

**Rod Centres as Specified by Customer**  
Type G = 0-900mm  
Type G1 = 901-1300mm  
Type G2 = 1301-1800mm

**NOTE:**  
When using Type G the working load must be halved to select hanger size. Add weight of hanger assembly when calculating load to be supported.

Support Size	Dimension R
0-12	57
13-17	71
18-20	84
21	115
22	131

### TYPICAL EXAMPLES

## VARIABLE SPRING SUPPORTS

### TYPICAL EXAMPLES

## VARIABLE EFFORT SUPPORTS

BV35, BV70, BV140, BV210

## REQUEST FOR QUOTATION FORM

### CUSTOMER DETAILS

Customer Name		Phone No.	
Project Reference		Fax No.	
Contact		Email	
BPG No. (Binder Use only)		Date	

### INFORMATION REQUIRED FOR QUOTATION ("COLD" means Non-operating, "HOT" means Operating)

A Variable Effort Model, Type, Size and Finish e.g. 730202 HDG is required to be nominated by the Customer. OR the Customer shall nominate a Model, Type and Finish, and BINDER determine the size based on customers specific Load and Travel requirements :

Supply Cold Load and Travel – Hot load calculated (Travel is always Cold to Hot)

"COLD"	LOAD	or	_____ (Kg)	VERTICAL TRAVEL (Y) (mm)	Up	_____ Down
		or	_____ (N)	HORIZONTAL (X) (mm)	+ve	_____ -ve
		or	_____ (lbs)	HORIZONTAL (Z) (mm)	+ve	_____ -ve

OR Supply Hot Load and Travel – Cold load calculated

"HOT"	LOAD	or	_____ (Kg)	VERTICAL TRAVEL (Y) (mm)	Up	_____ Down
		or	_____ (N)	HORIZONTAL (X) (mm)	+ve	_____ -ve
		or	_____ (lbs)	HORIZONTAL (Z) (mm)	+ve	_____ -ve

HYDROSTATIC TEST LOAD  YES / NO \_\_\_\_\_ (Kg)

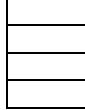

PTFE SLIDE  YES / NO Only available on F Type load flange. Load flange is square.

TO BE HOT INSTALLED  YES / NO Spring will be set to Hot Load, Travel will still be shown as Cold to Hot

Support Type (A, B, C, D, F ..etc) \_\_\_\_\_ PREFERRED SPRING RATE \_\_\_\_\_ N/mm \_\_\_\_\_ kg/mm

### SURFACE FINISH (Select Required Finishes)

#### Variable Unit (Casing, Turnbuckle etc)

HDG (Standard)

Paint – Binder System 1

Blast and Prime

Client paint spec:

Top Coat Color:

#### Spring Coil

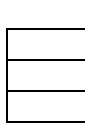

Acrylic Paint (Standard)

Marine Grade Plastic

Other :

### Threaded Load Tube on F, H and K

#### Types

HDG

Zinc Plated

Other (Please specify):

(Painting not recommended)

#### PAINT

Paint Spec Number:.....

Amount of Coats:.....

Top Coat Colour:.....

### INFORMATION REQUIRED FOR VARIABLE EFFORT SUPPORT 'HANGER ASSEMBLY'

#### Envelope for Hanger Assembly

- Bottom of Support Steel Elevation 1: \_\_\_\_\_ mm
- Pipe Centreline Elevation 2: \_\_\_\_\_ mm Or Length of Drop Rod: \_\_\_\_\_ mm

Pipe Size:

Pipe Operating Temp:

Insulation Thickness:

NB

°C

mm

Clamp Finish

Hanger Components Finish

Locknuts are usually supplied 1 per forging

(HDG/Paint/Mill)

(HDG/Mill)

NOTE : Variable Effort Supports can be manufactured without load and travel data, as long as correct model is selected. Support will be pre-set at mid range. Binder will not take any responsibility for spring's suitability where Client does not provide any load and travel data.
